PreViser Summer Newsletter

Welcome to the first UK newsletter about PreViser oral risk and disease assessment technology.

The importance of risk assessment (don't just take it from us!)

This September, at a satellite meeting of the British Society of Periodontology (BSP), the heads of the Perio departments of all the UK and Ireland Dental schools are meeting to discuss the integration of risk assessment into the curriculum, and the potential use of PreViser in undergraduate and postgraduate teaching. Meanwhile the American Academy of Periodontology have identified risk assessment as one of their top two strategic objectives. In 2008, they issued a statement saying that 'the clinical use of risk assessments will become a component of all comprehensive...and periodic dental and periodontal examinations' (see [here](#)). Is YOUR practice leading the way on prevention?

Hear about Perio and PreViser from Roy Page

Professor Roy Page, a world leader in Periodontology and a co-founder of PreViser is coming to the UK in September to lead the Dental School meeting at the BSP. We were delighted when he agreed to run a joint postgraduate meeting with Professor Iain Chapple at Birmingham Dental School on Tuesday 22nd September. Would you like to be notified when bookings are being taken? Just [email us](#).

Patient Information Leaflets

We have recently produced some information leaflets to help your patients understand more about perio disease and PreViser. You can see them on the [product page](#) of our website. If you would like copies to accompany your PreViser trial or subscription, please [email us](#).

Next issue

Prof Iain Chapple will provide a summary of the latest information on perio and systemic links.

Feedback from Denplan Deep Pockets Seminars

What did your peers think? Of the 126 questionnaires that were completed after the Deep Pockets seminars this spring, 94% of you said you were likely to or may use PreViser in your practice. 49% intended to take advantage of the month's free trial and a further 40% said 'maybe'. As you think about your fee structure for 2010, now is the time to consider trialling PreViser and putting 'wellness' and patient motivation at the top of your agenda.

Did you DNU?

You have DNAs, we have DNUs (Downloaded Not Used). We know how it is: that psychological barrier of using new technology however simple it may be, and all the other day-to-day factors that get in the way. But don't worry. If it was just a bad month and you did not get round to it, [request a renewal of your 30 day trial](#) now. And do let us know if we can help.
